(i) As, So, From (i) = = = = = Hence height from the base at which the section is made cm Hence option (d) Correct Answer: Description for Correct answer:Ratio of height\(\Large =\sqrt[3]{Ratio\ of\ volume} \)\(\Large \Rightarrow \frac{h}{H}=\frac{1}{3} \)\(\Large 3units\rightarrow 30 \)\(\Large 2units\rightarrow 20 \)\(\Rightarrow\) The cut is made 20 cm above the basePart of solved Mensuration questions and answers : >> Aptitude >> MensurationCommentsSimilar Questions Surface Areas and Volumes Consider a cone of cone of radius R and H . Let a cone of height h is cut off from the top of this cone whose base is parallel to the original cone. Let the radius of the cone that cut off from the original cone be r . Now, PQ = H – h = 30 cm – 10 cm = 20 cm Thus, the section of the cone is mode at a height of 20 cm above the base. Hope! This will help you. Let the Bigger cone be ABC and the smaller cone that is cut off the top be AFG. Let the radius of the smaller cone be = r, and the height = h and the radius of the bigger cone be = R, and the height = 30 cm (given) Consider the triangle ADG and AEC 0 each) so triangle ADG is similar to triangle AEC => AD/AE = DG/EC => h/30 = r/R .....(1) Also, Volume of the smaller cone = 1/27 (volume of bigger cone) (1/3) pi r2 h = (1/27)(1/3) pi R2 (30) h/30 = R2 /27r2 .....(2) from (1) and (2) r/R = R2/27r2 27r3 = R3 => R = 3r Substituting the value of R in (1) h/30 = r/3r => h = 30/3 => h = 10 So, the height at which the section is made = 30 - 10 = 20 cm Consider a cone of cone of radius R and H . Let a cone of height h is cut off from the top of this cone whose base is parallel to the original cone. Let the radius of the cone that cut off from the original cone be r . Now, PQ = H – h = 30 cm – 10 cm = 20 cm Thus, the section of the cone is mode at a height of 20 cm above the base. Hope! This will help you. 1. Let the height of the cone formed by cutting the plane be hInitial height of the cone(H)=30 cmLet the radius of the base be R and that of the cut cone be r.Since the triangle ADE and triangle ABC are similar hence,Now, Therefore height from the base where the plane is cut,= 30-10=20 cm Something went wrong. Wait a moment and try again. The height of a cone is 30 cm. From its topside a small cone is cut by a plane parallel to its base. If volume of smaller cone is 27 of the given cone, then at what height it is cut from its base ?
