# PHOTOSYNTHESIS FOLDABLE

Name: \_\_\_\_\_ Date: \_\_\_\_\_

Directions: Cut out the parts of photosynthesis and match them where they belong.

## Ingredients for Photosynthesis

## Products from Photosynthesis

### Plant nutrition

Santillana

Read and complete the text with the correct option.

Plants make their own food through a process called \_\_\_\_\_.

To do this, plants need: water, mineral salts, sunlight and \_\_\_\_\_.

Plants absorb water and mineral salts through their roots. This mixture is called \_\_\_\_\_.

Sunlight and carbon dioxide are absorbed by the \_\_\_\_\_.

With these ingredients, plants make \_\_\_\_\_.

Plants release \_\_\_\_\_ as a waste product of this process.

### Photosynthesis

Santillana

Match each step of the process of photosynthesis to the correct part of the diagram.

Absorption of water and mineral salts from the soil.

Raw sap travels up the stem to the leaves.

Raw sap mixes with carbon dioxide and is turned into dissolved sap with the help of sunlight.

Elaborated sap is transported to all parts of the plant.

LIVWORKSHEETS

### PHOTOSYNTHESIS.

By Dr. Binocs

Watch the video and complete:

1. Sunlight is a good source of \_\_\_\_\_.
2. Trees and plants make their food from \_\_\_\_\_.

3. \_\_\_\_\_ is a Greek word for 'light' and \_\_\_\_\_ is a Greek word for 'putting together'.

Now, it's simple! \_\_\_\_\_ is using light to 'put things together'. Plants use this process to make their food with the help of SUNLIGHT, \_\_\_\_\_ and \_\_\_\_\_.

4. Plants have tiny openings called the STOMATA present in their leaves through which they take in \_\_\_\_\_ and give out \_\_\_\_\_. They also use WATER and other nutrients to make FOOD which is absorbed by their \_\_\_\_\_.

5. The LEAVES contain tiny pigments called \_\_\_\_\_. These pigments take in CARBON DIOXIDE, WATER and \_\_\_\_\_ and turn them into SUGAR and \_\_\_\_\_. The SUGAR is then used by the plants as their \_\_\_\_\_ and the \_\_\_\_\_ is given out into the atmosphere.

This process as a whole is called \_\_\_\_\_.

Maria Liete

- \*12 questions- Matching, Multiple Choice
- \*Diagram

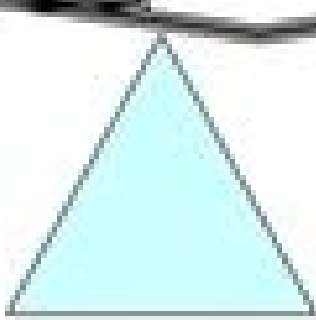

# How do plants make food ?

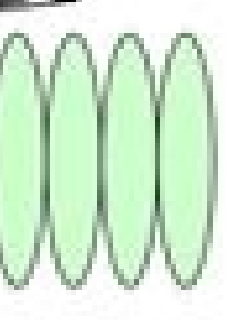

Plants make their own food in their leaves. They do not get food from the soil or from water. The leaves can make food for the plant because they are green. The green chemical in a leaf is called CHLOROPHYLL. Plants make food in a process called PHOTOSYNTHESIS. Photosynthesis can take place slowly or quickly. It depends on the temperature of the air. Photosynthesis takes place more quickly when it is warm.

Here are the 4 things needed for photosynthesis to take place:

sunlight

water

carbon dioxide

chlorophyll

Now see if you can answer these questions with TRUE or FALSE.

- Plants get food from the soil. \_\_\_\_\_
- Plants make food in their green leaves. \_\_\_\_\_
- Water gives the plant the food it needs. \_\_\_\_\_
- It is the green chemical in leaves that helps make the food. \_\_\_\_\_
- To make food a plant needs oxygen. \_\_\_\_\_
- Chlorophyll is green. \_\_\_\_\_
- Photosynthesis makes chlorophyll. \_\_\_\_\_
- Photosynthesis is when the plants makes food in its leaves. \_\_\_\_\_
- A plant needs water to make food. \_\_\_\_\_
- The plant gets food from the sun. \_\_\_\_\_
- Sunlight is needed for photosynthesis. \_\_\_\_\_
- The speed of photosynthesis is always the same in a leaf. \_\_\_\_\_
- The speed of photosynthesis depends on the temperature. \_\_\_\_\_
- It needs to be warm for photosynthesis to take place quickly. \_\_\_\_\_

Basic exchange of photosynthesis this basic table of photosynthesis facilitates the grip and maintenance of the process of photosynthesis with facilitates. Equips children of Grado 3 and Grado 4 with this graph to familiarize yourself with the concept. The equations of photosynthesis are present the equation of photosynthesis is visually attractively presented in this graph. The word equation affirms reagents: CO2 and H2O and glucose and O2 products, followed by a balanced chemical equation. Working sheet of the equations of photosynthesis work sheet the table of the equations with this completes the activity of the equations of the photosynthesis PDF, for children of Grado 5 and Grado 6 to reaffirm the concepts. Equation of the words and balanced chemical equations are included here. Photosynthesis process | Descriptions This printable flyer illustrates the photosynthesis process with concise descriptions. Understand the vital components involved and the products of photosynthesis with easy understanding descriptions. Photosynthesis | Basic vocabulary this workshop of the basic vocabulary vocabulary simplifies the photosynthesis process. The concept is divided into simple pieces for a vivid understanding of the terms and process involved in photosynthesis. Photosynthesis | Advanced vocabulary understand the photosynthesis process with this vocabulary working sheet. Here the definitions of terms associated with the light and dark reactions of photosynthesis were included. What is photosynthesis? Observe the diagram of the photosynthesis process presented in this fourth and fifth grade printing worksheet and connects the words from the word box to complete the paragraph and answer the question "What is photosynthesis?". Labeling the diagram of photosynthesis helps students pass from passive listeners to active participants erevircseD erevircseD ammagaid il erattecite rep elorap id allesac allad elorap el erazzilhu a eratnemele atrauq id e eratnemele azret id itnedutis ilg egirid .FDP isetnisotof id ossecorp led oroval id oilgof led arutattehcite atseuq Reagents and products brainstorm children of what they know and begin discussions on each reagent and produced with this worksheet. Enter students to identify reagents and products and describe them in a sentence. | Activity photosynthesis process summarizes the process of photosynthesis with this worksheet of cutting activity and gluing PDF. Beat the reagents and products involved in the process of photosynthesis and paste them into the appropriate boxes. Fill out the understanding of the test of students' blank spaces of 6th degree and 7th degree with this Blanks worksheet filling, which includes subtle details of the photosynthesis process. Read the sentences and connect the missing terms. Photosynthesis | The matching activity employs this photosynthesis matching activity to evaluate students' knowledge. Make an individual correspondence between the vocabulary words of photosynthesis and their descriptions. Structure of chloroplast | The graph develops an in-depth understanding of the process of photosynthesis with this printable chart. The labeled structure of the chloroplast chart indicates the exact location of the two processes within the leaf. The two phases of photosynthesis | Tracing the reactions of light-dependent photosynthesis and independent of light were clearly illustrated in this graph. Reagents and products of each stage are also labeled. Labeling light and dark reactions actively involve students with this activity label-photosynthesis. Reaffirm the light reactions and the Calvin-Benson cycle by labeling the two reactions together with their reagents and products. Reaction of light vs Dark reaction Differences between light and dark reactions are vividly declared using a versatile graphic organizer, T-card. Integrate the T-Chart to help students isetnisotof isetnisotof alled enoisiver id ednamoD .isetnisotof alled arusco e ecul id inoizae el art eznereffid el erednerpmoc a 7 odarg e 6 Questions is an effective teaching technique. Questions in this PDF working sheet are built to summarize the two phases in the photosynthesis process and arouse answers in the form of definitions and comparisons. Photosynthesis the story of how humans and animals are breathtaking. This is even more breathtaking. It is like plants get their energy on a daily basis. Read this printable step and answer the questions that ask you to delete the wrong title, write a short note and more. Every topic or lesson that a tutor teaches has the aim of making students understand the concepts relating to the subject. For this, they need evaluation tools that allow tutors to measure the way a student has assimilated the theory taught. One of the most elementary tools are work sheets. These worksheets on à è àvelop "photosynthesis" can help both the tutors and the students to review the lesson, obtain feedback and finally improve their respective performance. Considering the importance of this topic and its meaning in the ' Learning of levels of science more high in the future, it is important that students understand the process and the concept of "À« photosynthesis à è àvelop ,è àvelop ,à àvelop à , è à,- à ,àvelop ,ø à establish à à àvelop ,à àvelop ,à àias ,à àvelop. No credit card requested, no purchase obligation. Just program a free session to meet a tutor and get help on any topic you want! Photosynthesis is the process through which the energy of light is exploited and changed in chemical energy in the form of food sugar. Carbon dioxide is taken from plants and oxygen is emitted. Solar light + carbon dioxide + water = sugar + oxygen is carbon dioxide and water are combined and their atoms bind to form a sugar molecule. The ties of the sugar molecule the energy earned by light. The following is the chemical reaction for photosynthesis: photosynthesis is carried out by chloroplasts inside the cells of the plants. Chloroplasts contain chlorophyll (green color). Chlorophyll absorbs the energy of the sun which is the light of the sun. The il In the light (i.e. the particles of light) affect with electrons into chlorophyll, which transforms energy. A group of bacteria called Ciano is originally chloroplast. This is one of the examples of symbiosis. Here, cyan bacteria have been transmitted on guest cells as Eukaryotic Guest Cells millions of years ago and the photosynthesis method began. Not only these ancient symbions, the cyan bacteria that spread throughout the plant in the oceans (the three quarter of the earth's surface) are responsible for most of the photosynthesis that occurs today on Earth. (Note: an Eucharistic is an organism with complex cells or a single cell that has a complex structure. These cells have genetic material in the chromosomes in the nucleus of the cell.) In photosynthesis, the energy of light is converted into chemical energy and preserved in the form of food sugars. The energy conservation law is followed which is the quantity of light that the entry of energy is equal to the quantity of chemical energy which is production. Photosynthesis requires CO2+ H2O water and sunlight. The processes with which plants and other organisms such as algae capture the energy of light and use it to produce carbon dioxide and water food. Glucose is a type of sugar that provides us with energy. Glucose is necessary for all life forms to produce energy. It is an essential part of the stored food. The process through which glucose is broken down is called breathing - during breathing, the chemical energy stored in glucose is converted into other forms of energy, such as mechanical energy or thermal energy. Plants use some of this energy to grow, reproduce and perform other life functions. Unused energy is stored as food from plants. Plants cross both photosynthesis and the itnemogra itnemogra ilg onodividuvs icifitneics rotut itrepse irtson I .dlrowrotutE osserp" odarg "À 7 id ocifitneics oggarotut li noc itnatropmi itnemogra irtla e isetnisotof allus 'Aip id iprocS Sessions one by one. We also offer the advantage of personalized lessons, flexible programs and the convenience of learning from home. Etutorworld offers a convenient one-on-aone tutoring on the web for Grades K-12, test prep help for standardized tests such as Scat, Cogat, Map, Ssat, Sat, Act, Isee and AP. It is possible to plan online tutoring lessons to your personal program hours, all with a guarantee of reimbursement of money. The first online tutoring lesson is always free, no purchase obligation, no credit card requested. For answers/solutions to any question or to learn the concepts, take a trial free session. No credit card requested, no purchase obligation. Just program a free session to meet a tutor and get help on any topic you want! Q1. The process of manufacturing food in plants is called A) breathing b) breathing c) photosynthesis q2. Suzanne is sitting on a garden bench surrounded by a lot of plants. Which of these gases is Suzanne probably inhaled more? a) nitrogen b) carbon dioxide c) oxygen d) none of the aforementioned Q3. Photosynthesis is the process that takes place in l) mitochondriaii) chloroplastiit) q4 rebuk. Life without photosynthesis would not be possible. i) Trueii) False Q5.
