My phone with a huge quantity of data died, so it could be a software problem. How can I retrieve data from the internal internal telephone The only possible option is to contact a qualified expert in repairing mobile devices (preserving the functionality of the main components). If you are a phone display error, you can replace it by saving the data stored on the phone. If its chips are damaged, then no one agrees to conduct any repair service. The most important thing is that the phone starts and you can provide access to the Android file system. I open the program and there are no photos I want to recover. Instead of them, I can see the photos that are already in the gallery. In fact, such programs like Dr. Fone and Mobisaver have a tendency to show photos of the results that are not canceled. However, you can set a filter [A € â,~](#) "Show only deleted items [A € â,~](#)" via the settings. Anyway, it is better not to expect incredible results from such tools, since always tend to [A € â,~](#) "a little. There is a tool to recover deleted photos in the last 24 hours or within a period of Specified time? The data filter is available in most desktop and mobile apps. For example, in diskdigger for Android, when the scanner is active, you can specify the date when the photo you are looking for was created on the Your mobile device. You can also save time by setting the minimum and maximum dimensions of the image. Similar options are available in recovery for Windows. I copied data (photos, videos) on an SD card. After connecting the SD card to a PC, you will not see the card. You have to retrieve files through the recovery software. Read the article on this topic "What to do if the computer does not see a USB flash unit". This problem usually occurs due to the presence of Reading errors on an SD card . After fixing errors, you can connect the flash unit via the card reader to a PC. The last resort is to format and retrieve the storage unit of the supported supports. I was canceling some photos from my phone memory card on a PC, when I accidentally deleted the folder with photos. I downloaded the diskdigger program, but you can't find the files. There is another free software with the same feature. Among the most specialized tools, I highly recommend using photorec. You can choose to scan both the entire file system and free space on your SD card. Photos and images are also supported, including JPG, PNG, GIF, RAW and others. I found a problem with file recovery. When I arrived at the 6th step (save and retrieve on a unit), the software said that a premium version is required to save a file. Many programs use similar algorithms. If one of these does not provide results, try using another free tool for the same purpose. In your case, proof to recover or photorec, which are completely distributed free of charge but only for non-commercial use. Use.
