Instagram's mission statement may be to "capture and share the worlds moments but plenty of users have decided that they dont quite want to share everything they post with the entire planet. Whether businesses, individuals, or public figures make their Instagram accounts private, they have the shared goal of only rendering their content accessible to their followers. In the process, any hashtags added to a post are concealed from public searches as well. The account manager will have to personally approve the following requests before you can follow that account and see its content. Why do users make their Instagram accounts private, you wonder? Some Instagram users set their accounts to private for precisely the types of reasons youd initially suspect — because they are sharing wildly inappropriate content that would either violate community guidelines or that they only want their closest friends to see, for fear of a lost reputation. Other common reasons to set an Instagram account to private include: Making the account look more exclusive, thereby allowing accepted followers to feel special this is an increasingly common strategy for business accounts. Only wanting to share posts with close family and friends. Among job seekers, to hide content that shows them in a less-than-pristine light from prospective employers. In response to recent online harassment or cyberbullying. To prevent the account from being banned. Instagram profile picture size is important for many reasons. First of all, you should not feel bad about using this tool. It is entirely reasonable for someone to wonder how beautiful or handsome is their new follower. Therefore, why would you not want to check someone's Instagram profile photo with our viewer?We all do it. We all check the profile picture of someone's account to be just sure to know if they are worthy of keeping around, especially if it is private. However, it is a known fact that people use their best pictures to give it the honor to be the flagship of their social machine. Therefore, it can be a useful tactic to check their profile pictures at first hand before even considering to check others.In this way, you can save yourself from wasting your time on people who you would never ever give a chance at all. If you think like this, you are doing this person a favor too. They should not waste their time either. Maybe that is shallow, but it is what it is. Different people have different priorities. If you want someone beautiful to zoom in on their picture, you should be able to get what you desire. So, why not take a closer look at your potential lover's profile picture and decide if they are really who you want to be for the rest of your life, or at least for a while?There are several things that you need to consider when choosing your Instagram profile picture. The first of these is that since Instagram profile photos are displayed inside a circle (the icon inside which you see your profile picture on a small scale), the elements of focus in your picture should be centered. If they are not centered in the picture, they might be cropped out when displayed in the circle.Another important point is the size of Instagram photos. Instagram profile photos can be minimum of 110 x 110 pixels, and they are stored at 320 x 320 pixels. In the light of this information, keep in mind that you should upload an image appropriate for these dimensions. The best Instagram profile photo size should be chosen, considering these dimensions.Instagram photo size on your feed:Landscape: 1080 x 566 pixelsPortrait: 1080 x 1350 pixelsSquare: 1080 x 1080 pixelsSupported aspect ratios: Anywhere between 1.91:1 and 4:5Recommended image size: Width=1080 pixels, height =566-1350 pixels (depends on whether the image is landscape or portrait)A profile picture's visible aspect ratio is 110 x 110 or 180 x 180 regardless of its original high-quality version and circle. Therefore, an ideal Instagram profile size should be a lot bigger to prevent low pixels. It should be a perfectly square image to be a perfect Instagram profile picture, and it shouldn't contain any empty space. You can try all you want and devote an incredible amount of time to enlarging a 40 x 40 photo, but it will look like crap no matter what. Therefore, a great profile picture size is important; this includes cover photos.Sometimes, you can see the profile picture of the person as an IG post if you are following their account. However, if you're not, you need to use a third-party account. With InstaFollowers' brand new Instagram Profile Photo Viewer & Downloader, you can check people's profile pictures in large dimensions.It is so easy to use and get a master's hold on it. In no time, you can be too a Houdini and enlarge a user's 'profile pic' to its full size, full HD.If you are ready to rock your world, follow along.Open InstaFollowers and browse through our free tools to find and launch Instagram Profile Photo Viewer & Downloader.Open Instagram and find the profile you want to zoom in for their picture.Return to our free tool and type in their username to the designated field below.Tap on 'Check' to instantly see the person's profile picture in the desired resolution. Additionally, you can browse their followers and the following numbers, also their biography if they have one.Assuming that you already applied the steps above, you can easily see that it is possible to download your target person's profile picture in the largest dimension, which Instagram allows you to do so.All you have to do is follow the procedure as stated above and get to the screen where you are able to click on the enlarged picture and see the 'Download' button.You can tap on the 'Download' button to instantly receive the profile picture on your preferred device. It should have a file name that's similar to 'profile-photo.jpg.'If you want to download the photo on your device manually, you can click on the profile picture to enlarge it to fit your screen. Afterward, you can long tap on the image and save it on your device's gallery to take a look at later.However, we should clearly state that we are not affiliated with Instagram in any kind at all.Therefore, if you are downloading someone's profile picture, the risk is on you if anything wrong happens.However, it is known that there is nothing wrong with downloading someone's picture on your device if you are not planning to share it across other social network platforms. Also, if you want to have a look at Instagram profiles anonymously, you can use our Instagram Viewer tool as well.How to Use Instagram Profile Picture Tool?
