We verified this guideline in October 2018. Nothing in this Guideline should be interpreted as being incompatible with compliance with those obligations. This guideline covers the diagnosis, management and reference of infants and children under 5 years of age who have acute diarrhoea (lasting up to 14 days) with or without vomiting. Health professionals Commissioners and suppliers Parents, carers and families of children with gastroenteritis Is this guidance updated? They should do so in the context of local and national priorities for financing and developing services and in the light of their duties to take due account of the need to eliminate illegal discrimination, promote equal opportunities and reduce health inequalities. How we develop NICE guidelines This guideline was previously called diarrhoea and vomiting in children: diarrhoea and vomiting caused by gastroenteritis; diagnosis, evaluation and management in children under 5 years of age. Recommendations This address contains recommendations on: Who is it for? An abdominal aortic aneurysm Abortion care Accident prevention (see involuntary injuries among children under 15) Acne conglobate (see acne) Acne lightning (see acne) Acute coronary syndromes: acute coronary syndromes: secondary prevention and rehabilitation Heart failure acute Acute hospitals (adult patient wards), safe nursing staff Acute hospitals (adult patient wards), safe nursing staff Acute myocardial infection (see acute coronary syndromes: early management) Acute pancreatitis (see pancreatitis) Acute upper gastrointestinal bleeding Patients with severe hospital problems ADHD (see
