Chapter 5: Integumentary System Video Crash Course A&P Series: Integumentary System CCAC Libraries | Community College of Allegheny County | Pittsburgh, PA | © 2018 Figure 5.1 Your skin is a vital part of your life and looks (aâb.) Some people choose to embellish it with tattoos (a) or makeup (b) (credit to: "spaceodissey"/flickr) After studying the chapter, you will be able to: Describe the integumentary system and the functions of each Describe the layers of the skin and the functions of each Describe the chapter, you will be able to: Describe the layers of the skin and the functions of each Describe the layers of the skin and the skin different ills Common diseases, disorders and injuries affecting integument treatments for some diseases of the system What do you think when you look at the skin in the mirror? Do you think when you look at the skin in the mirror? Do you think you can cover it with makeup, add a tattoo, or maybe a body piercing? Or do you think about the fact that the skin belongs to one of the most essential and dynamic systems of the body: the integral system? T the largest system of In the human body. As such, the skin protects the internal internal organs needs daily care and functions of the integumentary system, as well as some of the diseases, disorders and wounds that can affect this system. no frames version 5. navigation of the integrumentary system website for 5, the medulla integrumentary system known: med hypodermis the name of the tissue in which the epidermis is composed? appoints the entry of ultraviolet pathogens, a waste of water name of the epidermis layer of epidermis - site of the mythical cell division †"New cells move from the basal layer to the surface - since cells move form distinctive layers in the epidermis ât ¢ cells acquire keratin while migrating through the epidermal layer aft of the skin? aft constantly splogated and replaced - it takes about two weeks for the new cell to complete their journey through the epidermis identifies this part of the skin; †¢ conelike projections of dermis that adapt to withdrawals of epidermis †¢ own blood vessels ¢, touch transep. tors †¢ forms fingerprints and toe prints name two important functions of the dermalic papillae blood vessels which what is another name for the hypodermis? appoints the part of the skin that performs these functions? †¢ globulb white action site determines the rate of melanin production when there is a melanin accumulation at a site this cause: which are the hair formed by: name the two parts of the external genital name this part of the hair? †¢ contains hair root †¢ follicle bulb issite of new hair growth $\hat{a} \in \text{nutritated}$ by dermal papillae $\hat{a} \in \text{nutritated}$ by dermal papilla "Control Questions 1. What two general types of glands found in the skin? Sweat and oil (sebaceous) 2. The skin and its accessory structures constitute the integumentario.3 system. List the two major skin layers: epidermis and dermis4. the level that is deeper for the two skin layers has two names: hypodermic or sottocutanea5. List the five layers of the epidermis (thick leather) from the bottom surface: i. Stratum basaleii . spinosumiii layer. granulosoosumiv la dell'ipodermica? Adipose8. What layer of skin contains no blood vessels? Epidermis9. Which layer of the epidermis is the most active mitotically? stratum Basale10. What kind of form cells ano most epidermis? Keratinocytes11. Appointment of the epidermis cell that performs the following functions: I. Perform phagocytosis to fight infection: Dendritichii. To produce the pigment for the skin: melanocyteviii. A sensory receptor touch: the cell Merkel / Discv. To produce a hard, impermeable protein for skin: cheratinocytev. cuboidal cells undergoing mitosis: basale12 cell. What is the protein for skin: cheratinocyteviii. A sensory receptor touch: the cell Merkel / Discv. To produce a hard, impermeable protein for skin: cheratinocyteviii. basal layer of the dermis? Dermal Papillae14. Determine which sensory receptors in the skin performs the following functions: I. Light touch: Meissner (tactile) Corpuscleii. Mechanoreceptors Skin Stretch: Ruffini Corpuscleiii. deep pressure and vibration: Corpuscleiii. deep pressure and vibration. What structures help to increase the surface contact and help to grasp objects and are otherwise known as fingerprints? Conctor frizioni16. What are three pigments that impart color to the skin? Highlight or circle the primary pigment: melanin, carotene, emoglobina17. Most of the sebaceous glands secrete sebum / oil through which route structure to the skin surface? Hair Follicle / SHAF18. The sebaceous glands secrete sebum by means of broken cells. What types of glands are these? Merocrine21. What chemical, biological 25. Dendritic cells, macrophages and dna are part of which type of protective barrier? biological 26. in warm environments, dermal vessels (circle one) expand / constriction and sweat gland activity (circle one) increases.
