Panasonic viera plasma green screen problems

blinks on your TV model (Panasonic-P50S30 Plasma TV) is aâ&TM~~~~~~~~ Itâ&TMs not listed, but itâ&TMs not oriously the SC and SS cards that cause it. That's because you only get 14 when they are connected. A replacement of the board of directors and the P board does not differ. ~ÂÂ with the SC card and the SS and SC20 card disconnected from the power supply and C3 connected, Connect and press the power button now you get 8 Blinks226; ÂÂ or this Disconnect the scan card (SC) and the data driver card (C3) from the AV- card (AV Board is the main advice). Now, when you plug in and turn on the power supply you should get a bright light ¢128;Â if you disconnect the SC and SS card connected from the power supply and C3 connected 226;Â;Â,Â,Â make sure SC20 is connected \hat{A} ¢ \hat{A} ; 147;;; power button; get 7 blinks226; 128; \hat{A} Repair \hat{A} ¢ Replace SC and SS Boards \hat{A} ¢ \hat{A} ; Replace SC and SS ;;;;;; the side of the main board) the first step is to check it, detach it from both sides and reconnect it. Turn on the TV. Does the 14th blink continue? If solid red led, replace the power card What you need to do is disconnect the TV and plug it in. As soon as you connect it and you hear the first click of the relay you need to press the power button before the second click of the relay, you need to be fast. Seven Blinks- Got the dreaded 7 blinking error on our Panasonic Plasma. Troubleshooting indicated that the SC card was defective. Ordered replacement table from ShopJimmy.com, exchanged and we are back in business! Older error codes Panasonic, found here- [Broken link] Plasma Fix, found here- [Broken link] Crack Screen Check on a Plasma TV Take a flashlight, angle the light on the plasma panel of the TV. Do you see any blacker looking spots or colored spots on the screen compared to the rest of the screen? Light shines from different angles to see cracks or screen damage. Panasonic Plasma TV display problem so I disconnected the z-sus card. The TV refused to turn on. When I reconnected the sound worked and one got a slight image, but it was mostly red and only about half the pixels worked. Most of the image it actually showed was towards the bottom of the screen. the more I left on the red more it got. I attached a photo,

which was when I turned on. It became redder the longer I left on. SS card replaced, same display. Replaced D-Board, TV works fine- Panasonic Plasma TV 7 Flashes Panasonic Plasma TV 8 Fl A=Main Board, D= Logic Board, SC=Y-Sustain Board, Upper Buffer, SS=X-Sustain Board, Upper Buffer, SS=X-Susta You need to find an error code. v=GFE14ElXz7g Read this- Virtually the same thing- Panasonic P50S30 TV Plasma Disconnect scanning unit(SC)board and data driver (C3) board from AV board- (AV Board is Main Board - This is the white flex cable for the main tip].
