Aircrack- ng linux

I'm not robot!

```
Aircracking 1.2 rc4 - (C) 2006-2015 Thomas d'Otreppe
http://www.aircrack-ng.org
usage: aircrack-ng [options] <.cap / .ivs file(s)>
    -a <amode> : force attack mode (1/WEP, 2/WPA-PSK)
    -e <essid> : target selection: network identifier
    -b <bssid> : target selection: access point's MAC
    -p <nbcpu> : # of CPU to use (default: all CPUs)
               : enable quiet mode (no status output)
     C <macs> : merge the given APs to a virtual one
    -l <file> : write key to file
Static WEP cracking options:
                 search alpha-numeric characters only
                 search binary coded decimal chr only ArchLinux
                search the numeric key for Fritz!BOX
    -d <mask> : use masking of the key (A1:XX:CF:YY)
    -m <maddr> : MAC address to filter usable packets
    -n <nbits> : WEP key length : 64/128/152/256/512
    -i <index> : WEP key index (1 to 4), default: any
    -f <fudge> : bruteforce fudge factor, default: 2
    -k <korek> : disable one attack method (1 to 17)
    -x or -x0
                disable bruteforce for last keybytes
                 last keybyte bruteforcing (default)
    -x1
                enable last 2 keybytes bruteforcing
    - X2
```

```
Aircrack-ng 1.4 - (C) 2006-2018 Thomas d'Olreppe
https://www.aircrack-ng.org

usage: aircrack-ng [options] =input file(s)=

Common options:

-a =amade= : force attack mode (1/MEP, 2/MPA-PSK)
-e <essid> : torget selection: network (dentifier
-b <br/>
-b <br/>
-b <br/>
-p <nbc/>
-nbcpu= : # of CPU to Use (default: all CPUs)
-q : enable quiet mode (no status output)
-C <mac> : merge the given APs to a virtual one
-l <file> = vrite key to file. Overwrites file.

Static WEP cracking options:

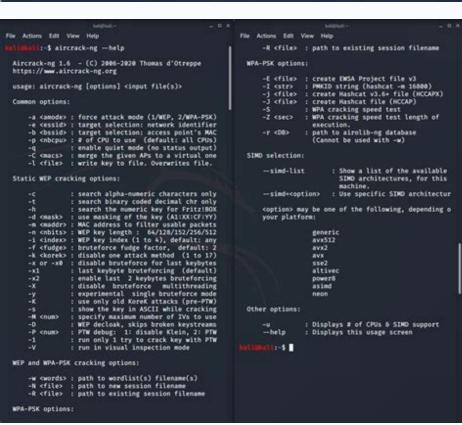

-c : search binary coded decimal chr only
-b : search binary coded decimal chr only
-m <mac> : search the numeric key for Fritz180X
-d <mas> : use mosking of the key (AirXXICFIYY)
-m <mac> : wEP key length : 64/128/152/256/512
-i <index> : wEP key length : 64/128/152/256/512
-i <index> : wEP key length : 64/128/152/256/512
-k <korek> : disable one attack method (1 to 17)
-x or -x0 : disable one attack method (1 to 17)
-x or -x0 : disable bruteforce for last keybytes
-x1 : last keybyte bruteforcing (default)
```

Aircrack-ng linux tutorial. Aircrack-ng linux tutorial pdf. Aircrack-ng linux download. Aircrack-ng linux. Aircrack-ng linux gui. Aircrack-ng linux install. Aircrack-ng linux commands. Aircrack-ng linux mint.

O Aircrack-ng é um conjunto de programas projetados para detectar redes sem fio, interceptar tráfego transmitido por redes sem fio, auditar chaves de criptografia WEP e WPA / WPA2-PSK (teste de força). Site oficial: Instala no Ubuntu assim: sudo apt-get install aircrack-ng Examinamos o nome da interface de rede sem fio (geralmente chamada

wlan0): Analisamos redes Wi-Fi existentes e analisamos seu tipo de criptografia, canal etc. Examinamos os serviços de rede em execução: Pare de interferir: sudo stop network-manager sudo killall wpa supplicant Inicie um monitor chamado mon0: sudo airmon-ng start wlan0 Por conveniência, abrimos um novo terminal (para que possamos retornar ao anterior com a lista de redes a qualquer momento) e interceptamos todos os pacotes em um arquivo (por padrão, ele é criado no diretório do usuário): sudo airodump-ng --channel N -w wep -i --bssid MAC mon0 Onde N é o número do canal wifi, MAC é o endereço MAC do ponto de acesso. Selecionamos a chave do arquivo: sudo aircrack-ng -a 1 -0 wep-01.ivs Iniciamos o serviço de rede do gerenciador de rede novamente para que possamos nos conectar à rede sem fio: sudo start network-manager Nós nos conectamos ao ponto sem fio e inserimos a chave de segurança já conhecida por nós. Aircrack-ng is a whole suite of tools for Wireless Security Auditing. It can be used to monitor, test, crack or attack Wireless Security Protocols like WEP, WPA, WPA2. Aircrack-ng is command line based and is available for Windows and Mac OS and other Unix based Operating systems. Aircrack-ng suite contains a lot of tools used for various purposes but here we'll only look at some important tools that are used more often in Wireless Security testing. Airmon-ng Airmon-ng is used to manage wireless card modes and to kill unnecessary processes while using aircrack-ng. To sniff a wireless connection, you need to change your wireless card modes and to kill unnecessary processes while using aircrack-ng. To sniff a wireless card modes and to kill unnecessary processes while using aircrack-ng. To sniff a wireless card modes and to kill unnecessary processes while using aircrack-ng. To sniff a wireless card modes and to kill unnecessary processes while using aircrack-ng. To sniff a wireless card modes and to kill unnecessary processes while using aircrack-ng. To sniff a wireless card modes and to kill unnecessary processes while using aircrack-ng. one or more wireless Access Points. It is used to analyze nearby Access Points and to capture handshakes. Aireplay-ng is used for replay attacks and as packet injector. It can be de-authenticate users from their APs to capture handshakes. Aireplay-ng is used to decrypt encrypted WEP, WPA/WPA2 wireless packets with known key. Aircrack-ng Aircrack-ng is used to attack WPA/WEP wireless protocols in order to find the key. Aircrack-ng is easy to install in Ubuntu using APT. Just type the following command and this will install all tools available in Aircrack-ng suite. use aircrack-ng to crack an encrypted wireless card for this tutorial (This might be different in your case). Now, kill all the processes running on wireless card using airmon-ng. Now, airmon-ng has started Monitor mode on wireless card, it'll appear as different name 'wlan0mon'. Run 'iwconfig' again to list wireless details. Then, use airodump-ng wlan0mon You can narrow down search using MAC (-bssid) and channel (-c) filters. To capture handshake (Handshake contains encrypted password), we need to save our packets somewhere using "-write" option. Type, :~\$ sudo airodump-ng --bssid 6C:B7:49:FC:62:E4 -c 11 wlan0mon --write /tmp/handshake.cap --bssid : Access Point's MAC Address -c : Access Point's channel [1-13] --write: Stores captured packets at a defined location Now, we need to de-authenticate every device from this Access Points MAC for Aireplay-ng -0: Specify number of deauth packets to send After a while, all devices will be disconnected from that Access Point, when they'll try to reconnect, running airodump-ng will capture the handshake. It'll appear at the top of running airodump-ng. Handshake is stored in '/tmp/' directory, and contains encrypted password that can be brute forced offline using a dictionary. To crack the password, we'll be using Aircrack-ng. Type :~\$ sudo aircrack-ng /tmp/handshake.cap-01.cap -w /usr/share/wordlists/rockyou.txt -w: Specify the dictionary location Aircrack-ng found the password used '123456789'. Now, stop Monitor mode on wireless card and restart the network-manager. Conclusion Aircrack-ng can be used to audit Wireless Security or to crack forgotten passwords. There are some other similar tools available for this purpose like Kismet but aircrack-ng is better known for good support, versatility and having wide range of tools. It has easy to use Command line interface which can easily be automated using any scripting language like Python. install aircrack Legacy information can be found here. OpenSSL development package or libgcrypt development package or libgcrypt development package or libgcrypt development package or libgcrypt development package. Airmon-ng requires ethtool and rfkill If USB bus is present, lsusb If PCI/PCIe bus is present, lspci LibNetlink 1 (libnl-dev) or 3 (libnl-3-dev and libnl-genl-3-dev) development packages. It can be disabled by passing -disable-libnl to configure. Kernel headers and gcc as well as make have to be installed on your system (build-essential on Debian based distributions) make and Standard C++ Library development package (Debian: libstdc++-dev) if using clang, libiconv and libiconv-devel make and Standard C++ Library development package Install the following via Homebrew (brew): autoconf automake libtool openssl shtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via Homebrew (brew): autoconf automake libtool openssl shtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via homebrew (brew): autoconf automake libtool openssl shtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via homebrew (brew): autoconf automake libtool openssl shtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via homebrew (brew): autoconf automake libtool openssl shtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via homebrew (brew): autoconf automake libtool openssl shtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via homebrew (brew): autoconf automake libtool openssl shtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via homebrew (brew): autoconf automake libtool openssl shtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via homebrew (brew): autoconf automake libtool opensyl shtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via homebrew (brew): autoconf automake libtool opensyl shtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via homebrew (brew): autoconf automake libtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via homebrew (brew): autoconf automake libtool pkg-config hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via hwloc pcre sqlite3 libpcap cmocka (optional) Install the following via hwloc pcre sqlite3 libpcap cmocka (optional) Install the f package is required. If you want to use airolib-ng and '-r' option in aircrack-ng, SQLite development package >= 3.3.17 (3.6.X version or better is recommended) If you want to use airolib-ng and '-r' option in aircrack-ng, SQLite development package >= 3.3.17 (3.6.X version or better is recommended) If you want to use airolib-ng and '-r' option in aircrack-ng, SQLite development package >= 3.3.17 (3.6.X version or better is recommended) If you want to use airolib-ng and '-r' option in aircrack-ng, SQLite development package >= 3.3.17 (3.6.X version or better is recommended) If you want to use airolib-ng and '-r' option in aircrack-ng, SQLite development package >= 3.3.17 (3.6.X version or better is recommended) If you want to use airolib-ng and '-r' option in aircrack-ng, SQLite development package >= 3.3.17 (3.6.X version or better is recommended) If you want to use airolib-ng and '-r' option in aircrack-ng, SQLite development package >= 3.3.17 (3.6.X version or better is recommended) If you want to use airclass a second package is required. Then compile with: gmake CC=gcc5 CXX=g++5 hwloc: strongly recommended, especially on high core count systems where it may give a serious performance boost Notes: On OS X, *BSD and Solaris, use 'gmake' instead of 'make'. In order to compile with clang instead of gcc, add 'CC=clang CXX=clang++' to the configure command. wget tar -zxvf aircrack-ng-1.7 autoreconf-i./configure --with-experimental make make install ldconfig Copy 'developer' directory from the AirPcap CD at the same as Linux but instead of make, use gmake (with CC=gcc5 CXX=g++5 or any more recent gcc version installed). Commands are exactly the same as Linux Note: Compilation parameters can also be used with the sources from our git repository, git clone cd aircrack-ng autoreconf -i ./configure --with-experimental make make install ldconfig When configuring, the following flags can be used and combined to adjust the suite to your choosing: with-airpcap=DIR: needed for supporting airpcap devices on windows (cygwin or msys2 only) Replace DIR above with the absolute location to the root of the extracted source code from the Airpcap CD or downloaded SDK available online. Required on Windows to build besside-ng, besside-ng-crawler, easside-ng, tkiptun-ng and wesside-ng when building experimental tools. The developer pack (Compatible with version 4.1.1 and 4.1.3) can be downloaded at with-experimental: needed to compile tkiptun-ng, buddy-ng, buddy-ng, buddy-ng, buddy-ng development package is also required to compile most of the tools. If not present, not all experimental tools will be built. On Cygwin, libpcap is not present and the Airpcap SDK replaces it. See -with-airpcap option above. On debian based distro, install libpcap-dev with-ext-scripts: needed to build airoscript-ng, versuck-ng, airgraph-ng and airdrop-ng. Note: Each script has its own dependencies. Note: It's only required in install phase. with-gcrypt: Use libgcrypt crypto library instead of the default OpenSSL. And also use internal fast sha1 implementation (borrowed from GIT) Dependency (Debian): libgcrypt20-dev with-duma: Compile with DUMA support. DUMA is a library to detect buffer overruns and under-runs. Dependencies (debian): duma with-xcode: Set this flag to true to compile on OS X with Xcode 7+. disable-libnl: Set-up the project to be compiled without libnl (1 or 3). Linux option only, without-opt: Do not enable-static, it will statically compile Aircrack-ng, withavx512: On x86, add support for AVX512 instructions in aircrack-ng binary. Useful when compiling statically and/or for space-constrained devices. Valid SIMD options: x86-avx2, x86-avx2, x86-avx2, x86-avx2, x86-avx512, ppc-altivec, ppc-power8, arm-neon, arm-asimd. Must be used with -enable-static -disable-shared. When using those 2 options, the default is to compile the generic optimization in the binary. -with-static-simd merely allows to choose another one. enable-maintainer-mode: It is important to enable this flag when developing with Aircrack-ng. This flag enables additional compile warnings and safety features. Run Idconfig as root or with "sudo" to solve the error message "command not found" or similar. Your system will look for the Aircrack-ng commands in the directories defined by the PATH command. Normally, the Aircrack-ng suite programs and man pages are placed in: /usr/local/bin /usr/local the directories (exclude the source directories) then determine which directories are in your PATH. To see which directories are included in PATH on your particular system enter: echo \$PATH It should show something like: /usr/local/sbin:/usr/sbin PATH. If the directories are missing from your PATH then you have a few options: Add the directory with "cd" and then run the commands from within the directory. Don't forget to add "./" in front of each command. Specify the full path for each command. So if Aircrack-ng'. With the exception of Linux penetration testing distributions, packages are usually out of date (MacOS is the exception). In this case, uninstalling the package and installing from sources is the recommended way to go. We offer packages (statically compiled binaries) for any distribution that supports .deb or .rpm packages thanks to Package Cloud.io so you can use your distribution that supports .deb or .rpm packages thanks to Package manager to install and keep Aircrack-ng up to date: Debian Ubuntu Mint SLES OpenSuse Fedora RHEL CentOS Amazon Linux Elementary OS While most folks want to use our "release" packages, "git" packages, "git an install program. You must manually install (unzipping archive) the software. Here are the steps to follow for Windows: Download the latest version of the Aircrack-ng suite for Windows to your computer. The link for the zip file can be found on the Wiki home page. Unzip the contents of the Aircrack-ng suite for Windows: Download the latest version of the Aircrack-ng suite for Windows to your computer. The link for the zip file can be found on the Wiki home page. called "aircrack-ng-1.6-win". This directory name will vary based on the exact version that you downloaded. This main directory contains three subdirectories - "bin", "src" and "test". Prior to using the software, make sure to install the drivers for your particular wireless card. See this link for the instructions. We currently only support Airpcap; other adapters may be supported but require development of your own DLL so the different tools can interack with it. To now use the Aircrack-ng GUI.exe inside "bin" subdirectory. The GUI requires .NET version 4.6.1 to run. Alternatively, open a command prompt (Start menu → Execute → cmd.exe) and change to the "C:\aircrack-ng-1.6-win\bin" directory and execute the individual commands. Important notes: Airmon-ng is a Linux/FreeBSD tool only. Remember that Windows only supports a limited subset of the commands. Some troubleshooting tips specific to XP and Vista can be found on this page. install aircrack.txt · Last modified: 2022/05/11 02:51 by mister x
