How can i reset my huawei phone without google account

Applicable products : Tablet , Smartphone A factory reset will erase all data from the storage space of your phone, including: Your accounts App data and system settings Installed apps, music files, images, and all files in the internal storage Make sure to back up your data before a factory reset. A factory reset will not change the version of your phone. Open Settings, go to , and touch Reset phone. You will be asked to enter the lock screen password if it has been set. Before restoring your phone to its factory settings, make sure that you have logged out of your HUAWEI ID. Otherwise, your phone may not be able to be activated afterwards. To log out of your HUAWEI ID, open Settings, touch your HUAWEI ID to access the account center, and touch Log out at the bottom of the screen. Turn off your phone before performing the following: Press and hold the Power button and Volume up button simultaneously until your phone vibrates and hold for an extra 5 seconds until your phone enters Recovery mode. To trigger Recovery mode on the Mate 30 Pro and Mate 30 RS that do not have physical volume buttons, press the Power button 5 times in a row after the phone vibrates during a power-on. Press the Volume up or down buttons to select the option to clear data, and press the Power button to confirm. Some phone models will respond to touches in Recovery mode. Press the Volume up or down buttons to select the option to restore your phone to its factory settings, and press the Power button to confirm. Some phone models will ask you to type in "yes" to double-confirm the operation. After the factory reset is complete, the phone will remain on the Recovery mode screen. Touch the option to restart your phone for it to access the home screen. Sorry for no help.Please select the following methods to obtain more support: Thanks for your feedback. Applicable products : Tablet , Smartphone It is recommended that you confirm whether you or someone else has changed the password. If your password contains different types of characters, make sure that you have entered the correct password, including with correct capitalization and symbols such as underscores. If the screen is locked, but you have not set a password or the password type or length is different from the one you have set, you may have enabled PrivateSpace. You can access the system by entering your PrivateSpace password. If you have forgotten the password, refer to Forgot the PrivateSpace password. Alternatively, restart your phone. Your phone will automatically access MainSpace after being restarted. If you have logged in to a user account, you cannot use the owner account and try unlocking again. To switch between accounts, touch the profile pictures (as shown in the following figure) or restart your phone. Your phone will automatically access MainSpace after being restarted. Data on Huawei phones is encrypted by the lock screen password using irreversible algorithms in compliance with the laws of the countries concerned to ensure the security of your privacy. Your phone and the data within it can only be decrypted using the lock screen password. Huawei phones do not come with an automatic password setting or changing function. If you have forgotten your phone password and want to use your phone, we can help you restore the phone to its factory settings. However, the data in your phone will also be cleared and cannot be restored. It is recommended that you confirm whether you or someone else has set a password or changed the password. If you cannot remember your password and need to perform a Reset phone, perform the following steps: Power off your phone and remove the USB cable if there is one connected. Press and hold the Power and Volume up buttons until your phone vibrates. Wait 5 seconds for your phone to enter Recovery mode. If you cannot enter Recovery mode, refer to Unable to enter Recovery mode. If the issue persists, take your phone and the proof of purchase to an authorized Huawei Customer Service Center for assistance. To trigger Recovery mode on phones such as the Mate 30 Pro, Mate 30 RS, and Mate 30E Pro that do not have physical volume buttons, press the Power button 5 times in a row after the phone vibrates while powering on. Press the Volume up and down buttons to select the option to clear data, then press the Power button to confirm. (For products that support touchscreen operations in Recovery mode, you can touch the screen to perform these steps.) Press the Volume up and down buttons to select the option to restore your phone to its factory settings, and press the Power button to confirm. For some phone models, you are required to enter "yes" to re-confirm before restoring your phone to its factory settings. Follow the onscreen instructions to complete the process. Once your phone is reset, it will return to the Recovery mode screen. Select the option to restart your phone. If the activation screen is displayed after restarting your phone, it means that you have enabled Find My Phone. You can access the system by entering your HUAWEI ID password. If you have forgotten your HUAWEI ID password, visit Reset Password. If your HUAWEI ID has been deleted, you will not be able to log in to this HUAWEI ID and use your phone under this account again, as all your data has been deleted and cannot be recovered. In this case, it is recommended that you take your device and proof of purchase to an authorized Huawei Customer Service Center for assistance. If you have logged in to your Google account, you will be asked to verify your account password when you restart you phone after performing a Reset phone. Enter the password to power on your phone. If you have forgotten your Google account password, follow the onscreen instructions to restore your Google account information. Sorry for no help.Please select the following methods to obtain more support: Thanks for your feedback. Google has added a security feature (Factory Reset Protection) to its Android OS. After the hard reset process, the OS asks you to enter the last Google account used in the phone before performing the factory reset to verify the identity of the real owner of the phone. This feature is important and is intended to avoid misuse of the device during thefts. But at the same time, some users have got into trouble because of it, when they have forgotten their GMAIL or password credentials after the hard reset. So, in this tutorial, we have brought the latest method to Reset FRP Huawei P20 EMUI 10 Bypass FRP Lock Without Sim data by following some simple steps. Once you set up a Google Account in your Huawei P20, the FRP is active, so after performing a Factory Data Reset, you'll be required to log in to the GMAIL username and password that you set up on the device, so if your Huawei P20 is stolen or lost, the device can't be used. In that case, frpbypass.net will give an amazing way to the FRP unlocking process for your Huawei P20 mobile, you can get a safe FRP unlocking experience to your Huawei P20 device easily and smoothly. The FRP feature has been added to the phones that are available on the modern Android systems (Lollipop, Marshmallow, Nougat, Oreo, Pie), The process of bypassing FRP in the latest versions of Google's Android is becoming challenging with every phone and every system and every version has a specific way to bypass this problem THE FRPBYPASS.NET CANNOT BE RESPONSIBLE IF YOU'RE TRYING TO BYPASS FRP ON STOLEN PHONE. Huawei P20 Specifications The Huawei P20 released in March 2018. Huawei P20 comes with 4 GB RAM and 128 GB ROM. The Huawei P20 has a 5.80 inches LTPS IPS LCD with a resolution of 1080 x 2240 pixels, Huawei P20 runs on Octa-core 4×2.4 GHz & 4×1.8 GHz HiSilicon Kirin 659 chipset, and powered by a 3500mAh non-removable battery. The Huawei P20 comes with a dual-camera 12-megapixel + 2-megapixel MAIN Camera and a 16-megapixel on SELFIE Camera. in your Huawei P20 device, The FRP feature will automatically Enable as soon as you add a Google Account to your Huawei P20. If you want to disable it, you just need to delete your account. Go to Settings ==> Accounts ==> Google and choose your account & Click on it, then click on delete the Account. The FRP bypass process available for free and you can use the FRP bypass app tool compatible with your device and we have brought the latest FRP Bypass APK which can help to bypass FRP on your Huawei P20 easily. Add a Google account: Settings >>> Accounts >>> Add an account >>> Google. Enter your Gmail account information. Remove Google account: Settings >>> Accounts >>> Google.
